

With the Fortus Farm Management program, you can easily and quickly check and compare results of animal weight, egg production, climate, feed and water intake and more, from all the houses.

Insight at a glance

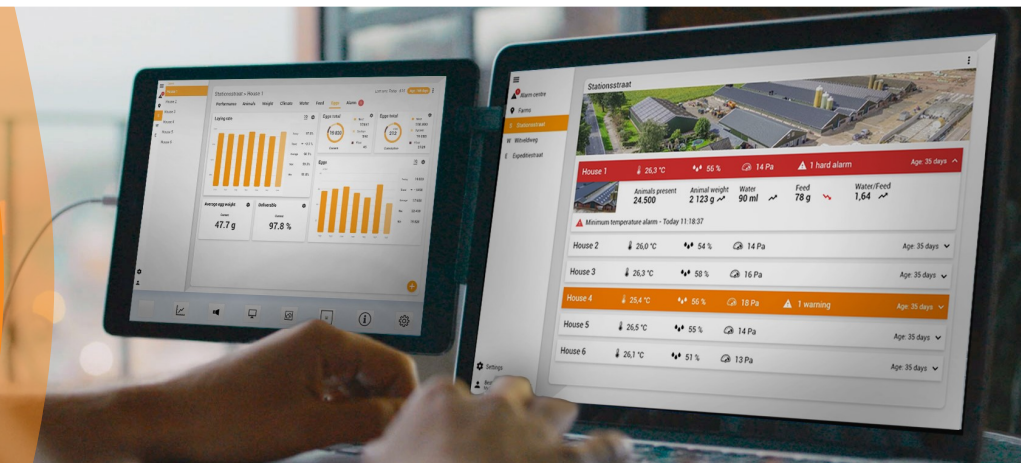

Fortus Farm Management is part of the Fortica® automation system and visualizes all relevant house data graphically and clearly in charts and diagrams on your PC. At a glance, you gain insight into your animals' living conditions and you, the poultry farmer, have complete control of all the house processes. The dashboard of the management program can also be set up based on your personal preferences, so you decide which data is important to compare.

Performance and Alarm center

Fortus Farm Management provides insight into the performance of your animals. Growth performance, laying percentage, feed conversion and PEF (Production Efficiency Factor) are clearly displayed. This makes it easy to compare the performance of your current flocks with that of finished flocks or flocks in other houses. Besides that Fortus Farm Management has an alarm center that personally alerts you in the event of acute changes in the house.

Fortus Farm Management:

- Compare the performance of your animals
- Alarm center for maximum safety
- Registration tool and data logging
- Total control of all your poultry houses

Climate

The Fortus Farm Management program presents all relevant data for each climate and ventilation controller graphically. By temperature, negative pressure, RH, CO2 to NH3. This allows you to see all the settings associated with a particular controller on a single display. Adverse influences are quickly and so can be avoided in the future.

Animal weight

The management program provides accurate data on the average weight, uniformity and distribution among the animals as a group. In addition, the Fortus Farm Management program allows you to link animal weight to feed, water and climate data. This gives you perfect knowledge about your animals' performance at any time of the day.

Feed and water management

The management program is an ideal way to implement your feeding strategy and gives you the opportunity to achieve lower feed costs and healthier animals. Accurate feed records give you daily insight into feed consumption and feed costs. You have perfect data showing any discrepancies in feed consumption, which can serve as an indication of the animals' health.

Egg production

Based on how your house is organized and the number of egg counters, management data is collected and clearly displayed via the Fortus Farm Management program on your PC. This enables you to easily compare egg production with other houses or other management data such as animal weight, climate data or feed and water consumption.
