

Fortica-PB

Poultry Controller for broilers, turkeys and ducks

The Fortica-PB is a versatile, user-friendly controller that gives you total control over all the poultry house processes, such as climate, feeding, watering, lighting and animal weighing.

The all-in-one control system

The Fortica-PB has been specially developed for poultry houses with broilers, turkeys or ducks in a floor housing system or cage housing. With this all-in-one system you can automate climate, feeding, watering, lighting and animal weighing. Dedicated control functions are available to manage your poultry house smoothly. This way you don't have to act manual anymore and you have all the management information needed to optimize your poultry production.

Improve animal growth with an optimum climate

Climate control is invaluable for the operational management of your broiler house. In the first few days, broiler chicks need a comfortable and warm environment with minimal ventilation. As the chicks grow, the living environment must change and the animals will require more cooling to maintain a comfortable temperature. With a good climate control system you ensure a pleasant living environment for you animals, that results in better growth and health.

Fortica in a nutshell

- All-in-one control system
- Suitable for all poultry houses
- A user-friendly 3D customizable overview
- Control and notifications from anywhere

For every possible ventilation approach

Whatever type of ventilation or outdoor climate your poultry house has, the Fortica always ensures a perfect indoor climate. Whether you use lengthwise ventilation, combi ventilation, tunnel ventilation or any combination. The Fortica has different settings for all types of ventilation systems, which guarantees perfect air distribution in your poultry house.

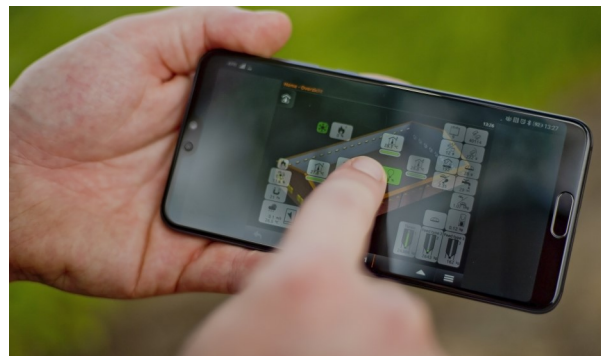

Control and notifications from anywhere

The SyslinQ Remote App allows you to remotely control the Fortica 24/7 with a smartphone or tablet. With an extra notification module you can receive alarms and warnings from your poultry house as notifications on your smartphone, tablet or smartwatch. This way you quickly see whether immediate action is required.

Extremely user-friendliness

The full 12 inch touchscreen operation makes this controller extremely user friendly and clear. A 3D customizable overview of the poultry house can be produced using clear symbols. The controller can be configured in more than 20 languages. It supports both the metric and imperial units of measurement.

Visualize all your data with Farm Management

Fortus Farm Management (part of Fortica) visualizes all relevant house data graphically and clearly in charts and diagrams on your PC. With this program you can easily and quickly check and compare results of animal weight, climate, feed and water intake, flock uniformity and more, from all the houses.
