

Fortica-PP

Poultry Controller for breeders and rearing

The Fortica-PP is a versatile, user-friendly controller that gives you total control over all the poultry house processes, such as climate, feeding, watering, lighting, animal weighing, nests and egg flow.

The all-in-one control system

The Fortica-PP has been specially developed for poultry houses with breeders and rear breeders. With this all-in-one system you can automate climate, feeding, watering, egg flow, lighting, nests and animal weighing. Dedicated control functions are available to manage your poultry house smoothly. This way you don't have to act manual anymore and you have all the management information needed to optimize your poultry production.

Hopper feed control for optimal breeding results

Do you want to have the optimal breeding results? The Fortica-PP is provided with a special feed hopper arrangement. With this control, you can do more than just ration the feed; the system can also control the amount of feed and feed composition for cocks and hens separately. This makes it possible to ensure the optimum condition of the animals and achieve a maximum number of hatching eggs and high fertilization rate.

Fortica in a nutshell

- All-in-one control system
- Suitable for all poultry houses
- A user-friendly 3D customizable overview
- Control and notifications from anywhere

Achieve an comfortable living environment

It's important that your breeders or pullets have the optimal living environment with the right temperature and relative humidity so they feel comfortable. With the Fortica you can achieve the right climate and environment for your animals. An optimum barn climate improves the health of your animals which leads to better egg production and lower veterinary costs.

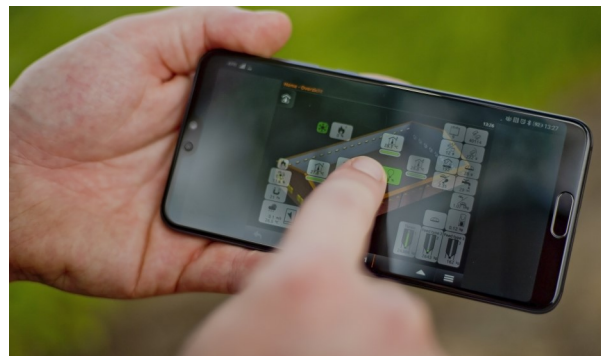

Control and notifications from anywhere

The SyslinQ Remote App allows you to remotely control the Fortica 24/7 with a smartphone or tablet. With an extra notification module you can receive alarms and warnings from your poultry house as notifications on your smartphone, tablet or smartwatch. This way you quickly see whether immediate action is required.

Extremely user-friendliness

The full 12 inch touchscreen operation makes this controller extremely user friendly and clear. A 3D customizable overview of the poultry house can be produced using clear symbols. The controller can be configured in more than 20 languages. It supports both the metric and imperial units of measurement.

Visualize all your data with Farm Management

Fortus Farm Management (part of Fortica) visualizes all relevant house data graphically and clearly in charts and diagrams on your PC. With this program you can easily and quickly check and compare results of animal weight, climate, feed and water intake, flock uniformity and more, from all the houses.
