

# Fortica-PS

## Poultry Controller for layers in aviary and free-range

The Fortica-PS is a versatile, user-friendly controller that gives you total control over all the poultry house processes, such as climate, feeding, watering, lighting, egg flow and animal weighing.

### The all-in-one control system

The Fortica-PS has been specially developed for poultry houses with laying hens or rearing hens in free-range and aviary keeping. With this all-in-one system you can automate climate, feeding, watering, egg flow, lighting, nests and animal weighing. Dedicated control functions are available to manage your poultry house smoothly. This way you don't have to act manual anymore and you have all the management information needed to optimize your poultry production.

### Optimize your chickens daily routines

Hotraco Agri is specialized in the automation of poultry houses with aviary and free-range systems. This is more complicated than for cage and group housing. In particular, ventilation, nest control and egg counting require a different approach in aviary and free-range houses. For example, it is very important that the laying hens should be back in the systems on time. Fortica can manage that by dimming the light in a specific order automatically.

### Fortica in a nutshell

- All-in-one control system
- Suitable for all poultry houses
- A user-friendly 3D customizable overview
- Control and notifications from anywhere

### Full package for optimize animal welfare

The Fortica-PS offers essential control functions to make it easier to improve animal welfare. With this system you can control components, such as pop hole doors and daylight products. The Fortica is making sure to always maintain the perfect climate in the house when controlling these welfare components. This enables all farmers to efficiently manage their daily routine.

### Control and notifications from anywhere

The SyslinQ Remote App allows you to remotely control the Fortica 24/7 with a smartphone or tablet. With an extra notification module you can receive alarms and warnings from your poultry house as notifications on your smartphone, tablet or smartwatch. This way you quickly see whether immediate action is required.

### Extremely user-friendliness

The full 12 inch touchscreen operation makes this controller extremely user friendly and clear. A 3D customizable overview of the poultry house can be produced using clear symbols. The controller can be configured in more than 20 languages. It supports both the metric and imperial units of measurement.

### Visualize all your data with Farm Management

Fortus Farm Management (part of Fortica) visualizes all relevant house data graphically and clearly in charts and diagrams on your PC. With this program you can easily and quickly check and compare results of animal weight, climate, feed and water intake, flock uniformity and more, from all the houses.
