

# Animal weighing

## Perfect insight into growth performance

Hotraco Agri's animal weighing solutions show you the average weight, uniformity and distribution among the animals in the flock. This gives you a continuously up-to-date picture of how the weight development is progressing.

### Automatic monitoring of animal weight

As a poultry farmer, it is important to be able to monitor your animals' growth closely. With our animal weighing solution you get continuous insight into the growth performance and weight developments. Up-to-date growth information can provide you a good indication of the health of your animals. Besides that you can optimize the planning of the processing plant because broilers can be delivered to the slaughterhouse at the optimum weight.

### Animal weighing scales for various situations

We have animal weighing scales for all types of poultry and differing types of housing systems. The principle behind our animal weighing solution is differential weighing, which is detected by the scale. This enables our systems to accurately determine the average weight of the animals. Deviations become visible quickly, so you can take timely action and improve the results.

### Benefits of automatic animal weighing

- Insight into daily growth of body weight
- Indication of bird health
- Uniformity of the flock
- Optimal planning for processing plant

#### **DWS-3-ZW**

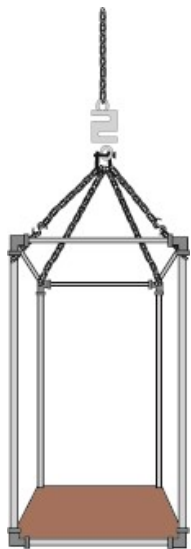

*for turkeys in free range housing*

The DWS-3-ZW is a weighing system developed specially for turkeys and can measure weight up to 100 kg. A cage construction (1x1x1.5 m) has been incorporated into the system and can be suspended in the poultry house between the turkeys at the proper height through the use of a hand winch. This will cause the animals to jump onto the weighing platform at regular intervals.

#### **DWS-4-ZW**

*for broilers and breeders in free range housing*

The DWS-4-ZW is a weighing platform for broiler chicks and breeders that range freely throughout the poultry house and can be used in various housing facilities and free range systems. The DWS-4-ZW is also suitable for hens and roosters and can weigh animals up to 12 kg.

**DWS-3-ZW**

**DWS-4-ZW**

**DWS-5-ZW**

**DWS-6-ZW**

#### **DWS-5-ZW**

*for layers in aviaries and enriched cages*

The DWS-5-ZW is a weighing system with a perch for layers that can be used in aviaries (small-scale or otherwise) and enriched cage barns and can be suspended as desired throughout the barn. The perch is a 1" stave (33.7 mm in diameter and 460 mm in length) and can be adjusted in height.

#### **DWS-6-ZW**

*for broilers and pullets in cages*

The DWS-6-ZW is a weighing system with a platform for aviaries (small-scale or otherwise) and enriched cage barns. The DWS-6-ZW can also be used in broiler cages. The roosting platform is 231 x 302 mm and is meant to be suspended in the system.
